PROBLEM EVOLUTION

**Time-consuming** and inconsistent traditional interviews required automation.

Manual assessments were error-prone, necessitating objective ML-based analysis.

Managing extensive candidate and employee **data** manually was inefficient, requiring centralization.

Traditional HR methods struggled to handle **increasing volumes**, needing a scalable solution.

TECH STACK USED

IMPLEMENTATION

User login/signup

User-friendly interface for selecting
    1. Virtual Interview
    2. Data retrieval of employees.
Through Voice Assistant ONLY!

Integration of different deployment platforms like Akash Networks (Containerization and decentralization using Docker), Render, pythonAnywhere.

Different side pages like about us, contact us, edit profile.

FUTURE SCOPE

Growth

Emotion-based Interview,
Resume summarization
Multilingual Supported

Customer Satisfaction

The first and foremost is customer satisfaction.
Improve the UI to make it more user-friendly and
generate a large and more improved responses.

Thank You
For Time
